

QwenProxy - Multimodal Test Document

Repository: <https://github.com/pedrofariasx/qwenproxy>

This PDF was generated as a synthetic document for testing multimodal models. It summarizes the purpose and architecture of the QwenProxy project.

Overview

QwenProxy is an OpenAI-compatible proxy that routes requests to Qwen models. The project focuses on API compatibility, account rotation, tool calling support, streaming responses, and browser automation techniques.

Key Concepts

- OpenAI-compatible endpoints
- Multiple account management
- Automatic rotation and failover
- Tool calling support
- Streaming responses
- Playwright-based automation
- Proxy architecture for AI workloads

Architecture Notes

A typical request flow is: Client → OpenAI-Compatible API → QwenProxy → Account Router → Browser Session → Qwen Service → Response Stream → Client.

Sample JSON Payload

```
{ "model": "qwen3-coder", "messages": [ {"role": "user", "content": "Hello"} ],  
  "stream": true }
```

Test Keywords

QwenProxy, OpenAI API, Tool Calls, Playwright, Streaming, Proxy Server, LLM Gateway, Browser Automation, Account Rotation, Responses API.
